

## **RDBMS Question bank**

### **PART-A**

1. Define DBMS
2. Give the disadvantages of file processing system
3. What are the three levels of abstraction?
4. What is physical, logical and view level data abstraction?
5. What do you mean by instances and schemas?
6. What are the two levels of independence?
7. What is an entity relationship model?
8. Define data model
9. What are attributes?
10. Define single valued and multivalued attributes
11. Define Database Recovery
12. What is a transaction?
13. What are the basic notations available in E-R model?
14. What do you mean by simple and composite attribute?
15. Write the two categories of the query language.
16. What is meant by normalization of data?
17. What is meant by functional dependencies?
18. Define database management system.
19. List any eight applications of DBMS.
20. Define instance and schema
21. What is conceptual schema?
22. Define data model?
23. What is storage manager?
24. What are the components of storage manager?
25. What is the purpose of storage manager?
26. What is a data dictionary?
27. What is an entity relationship model?
28. What are attributes? Give examples
29. What is relationship? Give examples
30. Define the term Entity set
31. Define the terms Relationship set
32. What are stored and derived attributes?
33. Define null values
34. What is meant by the degree of relationship set?
35. What is meant by the cardinality of relationship set?
36. Define weak and strong entity sets?
37. What is first normal form?
38. What is meant by functional dependencies?
39. Explain trivial dependency?
40. What is meant by computing the closure of a set of functional dependency?
41. What is meant by normalization of data?
42. Define the term DDL
43. Define the term DML
44. What is embedded SQL?

45. Write short notes on relational model
46. Define tuple and attribute
47. Define the term relation.
48. Define tuple variable
49. Define the term Domain.
50. Define domain variable
51. What is a candidate key?
52. What is a primary key?
53. What is a super key?
54. List the table modification commands in SQL?

### **PART-B**

1. What is Database? Explain the advantages of DBMS over File Oriented System.
2. Explain the evolution of Database Systems.
3. Explain various types of Data Models in DB systems.
4. Logical DBMS Architecture/levels of Data Abstraction.
5. Define DBA. Explain the functions of DBA.
6. Explain the Goals of DBA.
7. Types of Database.
8. Relational Model and Relational Constraints, Integrity constraints.
9. Explain about ER-Model or ER-Diagram in detail with example.
10. Define Relationship. Explain.
11. Explain Degree of Relationships.
12. Define Attribute. Different types of attributes.
13. Define Entity? Explain Strong and Weak Entity Set.
14. How to transfer Conceptual Model into relational model (logical).
15. Explain about Generalization, Specialization and Aggregation.
16. Discuss the role and functions of DBMS.
17. How to convert ER diagram to relational database.
18. Define Normalization. Explain Different types of Normal forms.
19. Explain de-normalization with example.
20. Functional Dependency, Transitive Dependency.
21. Explain Table definition with example in SQL. (or) Explain about Database schema and table with the help of example.
22. Explain about DDL commands in SQL with Examples.
23. Explain about DML commands in SQL with Examples. (or) Explain in detail data manipulation.
24. Explain Different types of operators in SQL.
25. Nested Queries. Joins
26. Define Table, View. Differentiate Tables with Views.
27. What are the disadvantages of File processing?
28. What is DBMS? Explain advantages and disadvantages of DBMS.
29. What are the different components of DBMS?
30. Explain different types of databases.
31. Explain Relational Database Model.

32. Explain Entity Relationship Model.
33. What is a Table and explain its characteristics?
34. Explain different types of keys available in Relational Model.
35. Explain Database Integrity rules.
36. Explain different Relational set operators.
37. Explain different types of joins.
38. What are the different types of Relationships in DBMS?
39. What is INDEX?
40. Explain Codd's Relational database rules.
41. Explain basic notations of ER diagram
42. What are the different types of Entities?
43. Explain different types of Attributes.
44. Explain degree of relationships.
45. What are the database design challenges?
46. What is Normalization? Explain its advantages.
47. Explain 1NF.
48. Explain 2NF.
49. Explain 3NF.
50. Explain BCNF.
51. Explain 4NF.

### **PART-C**

1. What is Database? Explain the advantages of DBMS over File Oriented System.
2. Explain the evolution of Database Systems.
3. Explain various types of Data Models in DB systems.
4. Logical DBMS Architecture/levels of Data Abstraction.
5. Define DBA. Explain the functions of DBA.
6. Explain the Goals of DBA.
7. Types of Database.
8. Relational Model and Relational Constraints, Integrity constraints.
9. Explain about ER-Model or ER-Diagram in detail with example.
10. Define Relationship. Explain.
11. Explain Degree of Relationships.
12. Define Attribute. Different types of attributes.
13. Define Entity? Explain Strong and Weak Entity Set.
14. How to convert ER diagram to relational database.
15. Define Normalization. Explain Different types of Normal forms.
16. Functional Dependency, Transitive Dependency.
17. Explain Table definition with example in SQL. (or) Explain about Database schema and table with the help of example.
18. Explain about DDL commands in SQL with Examples.
19. Explain about DML commands in SQL with Examples. (or) Explain in detail data manipulation.
20. Explain Different types of operators in SQL.
21. Explain Nested Queries. Joins
22. Define Table, View. Differentiate Tables with Views.

23. What are the different components of DBMS?
24. Explain Relational Database Model.
25. Explain Entity Relationship Model.
26. Explain different Relational set operators.
27. Explain different types of joins.
28. What are the different types of Relationships in DBMS?
29. Explain Codd's Relational database rules.
30. Explain basic notations of ER diagram
31. What are the different types of Entities?
32. Explain different types of Attributes.
33. Explain degree of relationships.
34. What is Normalization? Explain its advantages.
35. Explain 1NF with example.
36. Explain 2NF with example.
37. Explain 3NF with example.
38. Explain BCNF with example.
39. Explain 4NF with example.
